

Harmonized System (HS) Codes

Definitions:-

HS stands for Harmonized Commodity Description and Coding System. The HS is the international standard for reporting goods to customs and other government agencies. It is a numeric language that is used by more than 180 countries worldwide, and almost 100% of international trade. The HS was created and is administered by the Brussels-based World Customs Organization (WCO).

HS codes are essentially the language of international trade. They are the numerical codes that describe "what" is being shipped to and from countries worldwide, and they form the basis upon which all modern customs management systems operate. The first 6 digits of the HS are used universally. Each country may then add to the original 6 to suit its own tariff and statistical needs, creating 8, 10, and sometimes 12 digit national codes.

The International HTS (Harmonized Tariff Schedule) contains 97 chapters divided into 21 sections. The first 2 digits is the number of the chapter. The next 2 digits define the chapter heading and the next 2 digits thereafter define the chapter sub-heading. These first 6 digits is standard for all countries. So when we come across 4202.92, we know it is some kind of a bag anywhere in the world.

Applications:-

Countries use the HS as a basis for:

- * Customs tariffs
- * Collection of international trade statistics
- * Rules of origin
- * Collection of internal taxes
- * Trade negotiations (e.g., the World Trade Organization schedules of tariff concessions)
- * Transport tariffs and statistics
- * Monitoring of controlled goods (e.g., wastes, narcotics, chemical weapons, ozone layer depleting substances, endangered species)
- * Areas of Customs controls and procedures, including risk assessment, information technology and compliance.
